Vari-Green VOC Control

The Indoor Air Quality VOC control senses the level of volatile organic compounds (VOCs) in a space and automatically adjusts the ventilation rate to the space by increasing or decreasing the speed of the fan based on the level of VOCs present. Up to 10,000 unique VOCs exist and Greenheck's VOC sensor can detect all of them. Recommended for applications experiencing intermittent human traffic including bathrooms, classrooms, cafeterias, or other spaces where quality of air is a concern.

- Adjustments for air quality setpoint, minimum and maximum fan speed
- Fan speed and VOC level are available as analog outputs to be read by a building automation system or secondary device.

Características de funcionamiento

No hay curva del ventilador disponible.

Características de Construcción

Includes

Vari-Green VOC control

California Residents

 **WARNING**

This product can expose you to chemicals including cadmium used in the processing of corrosion resistant metal and fasteners, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information visit www.P65Warnings.ca.gov
